

Tabletop Microgreen Seeder

The Tabletop Microgreen Seeder is a versatile and easy-to-use system designed specifically for micro and baby green seeding. Engineered to accommodate a variety of seed types, this compact unit features multiple roller options and is constructed from corrosion-resistant aluminum, ensuring it meets food safety standards. Its high-torque motors are equipped with variable speed settings, allowing for precise control over seed dispensing and ensuring consistent seed distribution. The design is highly focused on simplicity and convenience, facilitating easy maintenance, quick component swaps, and adjustments to seeding parameters. This tabletop model is portable, making it ideal for moving and storing when not in use. Designed for energy and time efficiency with minimal operator intervention needed, it's an excellent tool for optimizing seeding operations. Suitable for growers who are seeding up to 2500 trays per day, it's specifically crafted to boost productivity in a low-cost, automated manner.

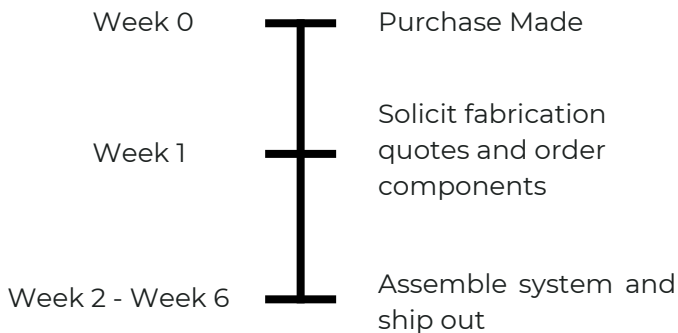

Dimensions: 64" x 17"
Weight: 55 lbs

Item	Price USD
Tabletop Microgreen Seeder	\$10,000
Resin-Printed Roller	\$200
Metal Roller	\$400

Note: Rollers are purchased separately due to their seed-specific nature. Spare fasteners and additional parts included.

Timeline

ROI

The return on your seeding machine comes from labor savings as well as the more consistent and increased yields from your final products. **We estimate that a farm doing 500 trays per week and a 3% increase in yields would see a return in less than 12 months.** The yield increase comes from the consistency of seed distribution that only a machine can provide. A more even distribution of seeds leads to less crowding and healthier greens which means a more consistent product and a faster payback on your purchase.
